

SP500

USA

Analysis of 07-Dec-2022

Closing Price of 06-Dec-2022

The SP500 represents approximately 80% of the American market capitalization with 499 companies being followed by the Screener.

The SP500 is currently trading at 18% below its 52 week high and 10% above its low.

Performance since December 7, 2021: -15.9% vs. -8.6% for the STOXX600 and -2.0% for the NIKKEI225.

Currently 56.7% of the stocks are in an upward trend.

Global Evaluation

Index	Market Value	Perf YtD	Nb of Stocks	Mkt Cap in \$bn	Stars	Sensitivity	LT P/E	LT Growth	4wk Perf	Div	Global Evaluation

Comparison December 7, 2021 - December 6, 2022

"Price to Estimated Earnings" (PE) - Evolution over five years

The estimated PE is calculated on the basis of the underlying stocks. The index is currently trading below its historical median of 16.0.

Price evaluation rating ★

In order to assess whether an index is correctly valued, we focus on Peter Lynch's broadly accepted methodology of comparing the projected earnings growth and dividend with the estimated PE ratio. Based on this approach, we feel this index is currently slightly undervalued. A "Forecasted Growth + Estimated Dividend Yield to Estimated Price Earnings" ratio higher than 0.9 indicates that the index's price includes a discount to growth of -8.4%.

Earnings revision trend ☆

Compared to seven weeks ago, the analysts have lowered -1.5% their earnings estimates. This negative trend began November 1, 2022 when the index was at 3,856.1.

Technical Trend and relative Performance ★★

The index is currently at a level close to its 40-day moving average. Prior to this (since October 28, 2022), it traded above this moving average. The confirmed Technical Reverse point is currently 3% lower.

Checklist

Nyon, 07-Dec-2022 06:30 GMT+1

Price & Sensitivity Evolution

Groups by market capitalization SP500

Volatility

Volatility is often used as a sensitivity factor. It measures the magnitude of upward and downward movements of a stock or index. The higher the volatility, the more an index is considered as sensitive. As of the last update, the monthly volatility of 24.4% is higher than the last few years' average of 16.0%. The high magnitude of short term price fluctuations indicates the market is very nervous. The long term volatility of 23.7% is clearly higher than that of the European STOXX600 index of 18.5%.

The sensitivity factor in declining markets

The "Bear Market Factor" measures the behavior of the SP500 in declining markets. In this context, the SP500 has a tendency to amplify the drops of the index TSC_World. This shows a highly sensitive behaviour of the index during market declines. The SP500 has a tendency to amplify the drops in the index TSC_World by 0.51%.

The sensitivity factor in rising markets

The "Bad News Factor" measures the index's corrections during rising international markets. In this configuration, the market slightly sanctions the SP500 when there is specific pressure in this particular economic zone. When the index declines in a rising world market its average deviation is -0.76%.

Sensitivity analysis summary

Generally speaking, the SP500 index shows a highly sensitive behaviour illustrated by a high Bear Market factor exaggerating the sensitivity.

The largest group in terms of market capitalization, Technology, represents 28.6% of the SP500. In order of size follow Health Care with 14.3% and Industrial Goods & Services with 8.8%.

2022 performance of the groups of the American market

Since the beginning of the year, the SP500 index recorded a variation of -17.3%. The index is made up of 18 groups with performances ranging from -43.7% to 56.2%.

Evolution over the last 3 months

The Global Evaluation is a multi-criteria approach to identify the stocks with the best overall outlook. The assessment is the compilation of fundamental (PE, growth, earnings revisions, dividend, etc.), technical (moving average, relative performance), and sensitivity (behaviour in declining markets and sensitivity to bad news) factors. In order to present a relevant selection, only companies with a market capitalization above \$1bn and showing good earnings growth valuations, are listed. Furthermore, the eligible stocks must have a minimum rating of two stars, a neutral to positive valuation, and a low to moderate sensitivity. When the global rankings are identical, the analysts' 7 week earnings per share revision (7 wk EPS rev) acts as the deciding classification element.

SP500

USA

Analysis of 07-Dec-2022

Closing Price of 06-Dec-2022

Index	Market Value	Perf YtD	Nb of Stocks	Mkt Cap in \$bn	Stars	Sensitivity	LT P/E	LT Growth	4wk Perf	Div	Global Evaluation
SP500 (US)	3,941.26	-17.3%	499	35,053.48	★★★★☆		15.9	14.0%	4.5%	1.7%	

Evolution over the last 3 months

Defensive stocks

Symbol Market	Name Sector	Price Ccy	Mkt Cap in \$bn	Bear Mkt Factor	Stars	Sensitivity	Global Evaluation
MRK US	MERCK & COMPANY Pharmaceuticals	108.93 USD	276.18	-191	★★★★★		
BMY US	BRISTOL MYERS SQUIBB Pharmaceuticals	79.92 USD	169.92	-190	★★★★☆		
KHC US	KRAFT HEINZ Food Products	39.42 USD	48.29	-174	★★★★☆		
K US	KELLOGG Food Products	73.07 USD	24.85	-168	★★★★☆		
GIS US	GENERAL MILLS Food Products	85.38 USD	50.68	-167	★★★★★		

The sensitivity assessment is based on essentially two criteria: the stock's "behaviour in declining markets" (Bear Market Factor), and the stock's "sensitivity to bad news" (Bad News Factor). By positioning a stock according to the world averages, three sensitivity levels can be attributed (low, moderate, high). Combining these elements makes it possible to create a final ranking of stocks in the market. To present the most useful selection, only companies with a market capitalization greater than \$1bn and showing good earnings growth valuations are listed. Furthermore, the eligible stocks must have a minimum rating of two stars, a neutral to positive valuation, and a low to moderate sensitivity. In case of a tie, the stock's "behaviour in declining markets" will act as the deciding classification element.

Attractive dividends

Symbol Market	Name Sector	Price Ccy	Mkt Cap in \$bn	Div	Stars	Sensitivity	Global Evaluation
T US	AT&T Integrated Telecommunications	19.17 USD	136.62	6.1%	★★★★☆		
DOW US	DOW INC Commodity Chemicals	51.05 USD	35.93	4.9%	★★★★☆		
WBA US	WALGREENS BOOTS ALLIANCE Drug Retailers	40.59 USD	35.10	4.9%	★★★★★		
VICI US	VICI PROPERTIES Real Estate Holding & Development	33.54 USD	33.45	4.9%	★★★★★		
IP US	INTERNATIONAL PAPER Paper	36.42 USD	12.95	4.6%	★★★★☆		

Evolution over the last 3 months

Within this category, the equities that have been chosen are based on the expected dividend yield over the next 12 months. The selection takes into consideration only companies with payout dividends totalling not more than 70% of their forecasted income. This is to ensure that only companies are included that show a strong potential for a continued payout of dividends in the future. This profile also requires a minimum of 2 stars and a market value greater than one billion USD.

Evolution over the last 3 months

Stocks with a low PE

Symbol Market	Name Sector	Price Ccy	Mkt Cap in \$bn	LT P/E	Stars	Sensitivity	Global Evaluation
VTRS US	VIATRIS Pharmaceuticals	10.93 USD	13.25	3.0	★★★★★		
UAL US	UNITED AIRLINES HOLDINGS Airlines	45.92 USD	15.01	4.4	★★★★★		
OGN US	ORGANON Pharmaceuticals	26.15 USD	6.65	4.9	★★★★☆		
DXC US	DXC TECHNOLOGY Computer Services	27.81 USD	6.40	5.4	★★★★☆		
AAL US	AMERICAN AIRLINES Airlines	14.33 USD	9.31	5.5	★★★★☆		

The price to earnings ratio (PE) may help to find undervalued stocks. If the PE of a stock is much lower than the PE of its reference market, the stock could have upside price potential. In order to present a relevant selection, only companies with a market capitalization greater than \$1bn and showing good earnings growth valuations are listed. Furthermore, the eligible stocks must have: a minimum rating of two stars, a neutral to positive valuation, a low to moderate sensitivity. When the PE ratios are identical, the analysts' 7 week earnings per share revision (7 wk EPS rev) acts as the deciding classification element.

Glossary - Equities

Global Evaluation

The rating results from several factors : fundamental and technical analysis, measure of sensitivity and benchmark trend.

The synthesis is rated on a 5 level scale:

- : **Positive**, almost all or all the factors are positive
- : **Slightly positive**, a majority of factors are positive
- : **Neutral**, balance between positive and negative factors
- : **Slightly negative**, a majority of factors are negative
- : **Negative**, almost all or all the factors are negative

The synthesis for the Indices and Industries is rated on a 3 level scale: Positive, Neutral and Negative.

Number of Stocks

The number of stocks in the index that can be analyzed.

Mkt Cap in \$bn

This number represents the Market Capitalization in USD bn. It is calculated by multiplying a firm's share price by the number of outstanding shares. For reasons of comparison, all results are in USD.

Valuation Rating

Our Valuation Rating indicates if a stock is "expensive" or "cheap" relative to its growth potential. This is used to determine whether or not the investor is paying a premium for anticipated growth.

To estimate a stock's value relative to its current price, our Valuation Rating combines:

- stock price
- projected earnings
- projected earnings growth
- dividends

We establish our rating by combining these elements.

There are five ratings, ranging from strongly undervalued to strongly overvalued .

Stars

theScreener.com's star rating system is designed to enable you to identify high-quality stocks quickly and easily.

In this easy-to-use rating system, stars are earned for each element specified below:

- Earnings Rev Trend = ★★★★★
- Valuation Rating , , = ★★★★★
- MT Tech Trend = ★★★★★
- 4 week Relative Performance > 1% = ★★★★★

Therefore, a stock can earn a maximum of four stars.

The lowest rating a stock can have is no stars.

Once a stock has earned a star, it will keep it until:

- Earnings Rev Trend becomes negative
- Valuation Rating becomes negative ,
- MT Tech Trend becomes negative
- 4 week Relative Performance drops below -1% (<-1%)

Div

This is the dividend in % for the next 12 months.

Even if the same number is shown, the dividend value can appear in one of four colors, depending on the earnings coverage:

- 0%, no dividend
- 4%, the dividends are covered (between 0% and 40% of earnings)
- 4%, the dividends represent between 40% and 70% of earnings
- 4%, the dividends are higher than 70% of earnings, which implies that the dividend coverage is not guaranteed.

Earnings Rev. Trend

The symbol shows that compared with their earnings revisions of seven weeks ago, the analysts have now raised their estimates (7wk EPS Rev; > 1%); the symbol indicates that compared with their earnings revisions of seven weeks ago, the analysts have now lowered their estimates (7wk EPS Rev < -1%).

When the earnings revisions (7wk EPS Rev) fall between +1% and -1%, the trend is considered to be neutral .

The symbol indicates that the last significant revisions have been trending positive.

The symbol indicates that the last significant revisions have been negative.

7wk EPS Rev

This is an abbreviation for 7 week Earnings Per Share Revision. This column indicates the value of these revised earnings. A figure of 2.8 signifies that compared with seven weeks

ago, the analysts have now revised and raised their estimates by 2.8%. On the contrary, a negative number means that the earnings would have been revised lower.

G/PE Ratio

In order to establish our Valuation Rating, we calculate the estimated growth of future earnings (LT Growth) plus dividend in %, divided by the estimated future PE ratio (Long Term P/E).

LT PE

This is the relationship between the price (P) and the estimated long-term future earnings.

LT Growth

This is the estimated annual growth rate of future earnings, normally projected over the next two to three years.

MT Tech Trend

The MT Tech Trend indicates the current trend, positive or negative , and the Tech Reverse indicates up to which price this trend will remain valid.

When a price falls to 1.75% above or below the Tech Reverse, the MT Tech Trend is considered neutral .

Once the price breaks out of the +1.75% neutral zone, the MT Tech Trend will change to positive.

The symbol indicates that the previous MT Tech Trend was positive.

The symbol indicates that the previous MT Tech Trend was negative.

4-week (Relative) Performance

This figure measures the dividend-adjusted performance of a stock relative to its national or regional index (compared to four weeks ago). As for an Index, it measures the net performance over 4 weeks.

Bad News Factor

To determine the "Bad News Factor" we analyze a stock's declines in rising markets. In this purely objective analysis, the actual reasons for a stock's behavior are not important. If a stock price falls while its relative index goes up, it can be assumed that the stock's performance has been affected by bad news - hence the name, "Bad News Factor".

Here a stock's movements are measured on a bi-weekly basis, during a sliding 52 week period. Every time a stock drops while its reference index rises, the difference is calculated in %, integrated into a yearly average and expressed in basis points.

The higher the "Bad News Factor," the more a stock has proven to be sensitive to bad news. The lower the "Bad News Factor," the less the stock has proven to be sensitive to bad news.

Bear Market Factor

To determine the "Bear Market Factor" we analyze a stock's price movements in declining markets.

This is the analysis of the movements, in a bi-weekly intervals, during a sliding 52 week period. The higher the "Bear Market Factor," the greater the probability a stock would drop when its relative index drops.

A "Bear Market Factor" that is strongly negative means the stock has been more resistant to losses in declining markets.

Sensitivity

Stock price developments are generally volatile and contain high risks that can result in a total loss. Based on a their historical behaviour, stocks are classified by sensitivity level. These sensitivity levels have to be considered solely in relative historical comparison to other stocks. Please note that even "Low Sensitivity" stocks are equities and therefore high risk investments that can lose up to all of their value, and that past performance is no indication of current or future performance.

"Sensitivity" is determined by measuring the "Bear Market Factor" and the "Bad News Factor" against its benchmark.

There are three grades of sensitivity levels:

- Low Sensitivity: The sensitivity indicators fall below the world reference average.
- Moderate Sensitivity: The sensitivity indicators are situated higher than the world reference average, but lower than standard deviation.
- High Sensitivity: The sensitivity indicators are at levels higher than standard deviation.

Volatility 12 M

Volatility measures the magnitude of upwards and downwards movements of a stock or index. The volatility 12 M shows the average volatility over the last 12 months.

% of Stocks in Uptrend

This is the percentage of stocks in a given list that have a positive Medium Term Technical Trend. If, for example, the aggregate of Technology / World, (which is made up of 458 stocks) has 8% "of stocks in Uptrend," it means that 38 of the stocks within that aggregate have a positive Medium Term Technical Trend.

Beta

Beta is often used as a measure of sensitivity. Where a Beta is greater than 100, the stock is more volatile than its reference index.

Correlation

Correlation is the degree of similarity in which a stock fluctuates in relation to its reference index.
